HISTORIC AMERICAN ENGINEERING RECORD

DEANSBURY BRIDGE

HAER No. CO-13

Date: 1922

Location: West of Kassler spanning South Platte River in Waterton vicinity, on border of Jefferson and Douglas counties.

Owner: Denver Water Department.

Significance: The bridge is a riveted single-span Warren through truss. The bridge was built as a narrow gauge, railroad bridge for the Denver, South Park and Pacific Railroad and it is presently used as an access road bridge. This is the second bridge on the site and it is a typical design for an early 20th century railroad bridge.
